## DEFIBRILLATORS

**DEFIBRILLATORS** Andrew Deptford, chairman of his local parish, says he has become an authorised reseller for Physio-Control, the company that invented the defibrillator in 1955.

Deptford says the defibrillators are well tried and tested and meet worldwide standards. The machines are standard issue to around 70 per cent of the UK's ambulance and first responder crews.

After carrying out extensive research, Deptford says he wants to 'demystify' the process and offer the right machine for home, workplace or community use, ethically at reduced prices.

He adds that he has negotiated special prices, directly from the manufacturers, which are passed on to the purchaser. The defibrillators are despatched directly from the manufacturer's Dutch warehouse.

## LIFTING EQUIPMENT

RUD has introduced a new lifting point solution, the ICE-LBG-SR, which the manufacturer says offers numerous advantages – it can be turned 360 degrees and is loadable in all directions.

The new product possesses an array of innovative designs, adds RUD. Its double SR ball enables the lifting device to be turned and flipped at high working load limits without affecting the mounting bolt stability, says the company.

Also, the advanced ball bearing technology is arranged in a double way, which transfers the force of the working load limits into a rotation movement without the jerks, adds RUD.

RUD says that safety is paramount across all its products.

## LIFTING EQUIPMENT

Materials handling equipment specialist Lift Safe reports that it has made the lifting and moving of chemical containers much easier at the Tyne and Wear factory of filter manufacturer Essentra Components.

Essentra, which manufactures and distributes a broad range of high-volume specialist plastic and fibre-filter products to customers worldwide, needed a lifter to move 25-litre chemical containers on its Jarrow site.

Lift Safe has provided a compact lifter, which the operators manoeuvre into position and then press a button to raise the lifting platform in line with the 25-litre container. This slides safely and easily on to the lifting platform, says the manufacturer. The lifters can lift up to 225kg in weight up to three metres, says Lift Safe.

## TRAINING

RRC is supporting IEMA's 'All Jobs Greener' initiative by offering its range of environment sustainability courses.

Sustainable thinking in the way products and materials are designed, manufactured, procured, distributed and sold results in the use of fewer resources and leads to more successful and profitable businesses. An IEMA-certified training course has three options:

- the half day leading with environmental sustainability workshop;
- the two day managing with environmental sustainability course; and
- the one-day working with environmental sustainability course.

The courses are suitable for any sectors and can be tailored to meet the specific requirements of any organisation.

## FALL PROTECTION

Safesite, a supplier of fall protection solutions, has introduced Kee Gate, a range of self-closing safety gates as part of its product portfolio. The product is designed to provide workers with a safety solution when working at height.

Designed to work both externally and internally and on ladders, roof hatches, walkways, with edge protection and plant machinery, Kee Gate are spring loaded so that they can automatically close behind the user. According to Safesite, this provides an added level of security and overcomes the potential for human error.

Safesite says that the Kee Gate is compliant with the requirements of EN 13374 Class A, EN ISO 14122 Part 3 and 4 and is CE marked to EN 1090.

## SAFETY GLOVES

Fortress Distribution, an exclusive importer, wholesale distributor and direct supplier of Black Mamba work gloves, is launching the new Black Mamba heavy duty impact glove in the UK market.

Ideal for oil and gas drilling, construction, mechanics, HVAC and automotive, the impact glove has been designed to meet customer needs by enabling the full back of hand protection while still allowing comfort and dexterity, says Fortress Distribution.

According to the supplier, the glove offers defence against abrasion, impact and hand fatigue and its features include palm and fingertip patches for extended wear; 3D curved fingers; four-way stretch fabric; hi visibility colour and TPR knuckle and back of hand protection.
